REVOLUTIONARY FARMING TECHNIQUE

Louw Bromfield in [Houstien] [uncertain] Chronkle.

Some prodigious things are stirring in the world of [egricutiure] [uncertain] which may have tremendous effects upon the pronomy- and well bring net only of the nation, but of the whole world.

One of the most recent [adrances] [uncertain] hay been [inthe] [uncertain] field of com and bog production and one in which Malaber Farm has had some part and will have an increasing role. It is the produc- [Uon] [uncertain] of corn and hogs under a system which could cut the farmers' coats by as much ae 76 per cent. For the sake out that at the [preeent] [uncertain] time, the fat hog is undesirable and the traditional relationship Between corn and hogs, known ae the corn-hog" [ratic,] [uncertain] has begun lo waver. Todey there ls no demand in the market for a fat hog. Indeed the farmer is docked several. [renta] [uncertain] a pound if his hogs are too fat.

Todey many a progressive farmer in the Middle Weet is not fattening hogs with If te 14 bushels of [higtpriced] [uncertain] corn [plua] [uncertain] labor and supple meets he ls growing" hogs and putting them on the market [a] [uncertain] about 00 pounds with the feed made up of Ladino-alfaifa and a maximum of three to four [buehela] [uncertain] uf [carn.] [uncertain] Sume [lof] [uncertain] the mote, advanced farmers are growing [theu] [uncertain] hega-seven in winter on alfalfa-Ladine silage and even dry alfalfa-Ledino hay. [Three] [uncertain] are the [farrortrs] [uncertain] who are making the big profit un hogs which bring top market price [Twath luw] [uncertain] feeding costs.

Recently there has been [atirring] [uncertain] sere oof remarkable experiments which primus to cut the eat of corn production by as much aa 60 [tuo S] [uncertain] per-cent while actually increasing the organic nitrogen content of the [aol] [uncertain] land, provided the farmer uses an [injj telligent fertiliser] [uncertain] program, constanl- Jly increasing the fertility of [tus] [uncertain] land. The same experiments check ali eo! [J ervaion,] [uncertain] much flood water [3.4] plerem] [uncertain] the hear sill content of atriums which annually costs taxpayers [mitsone] [uncertain] of dollars

to remove from rivers, harbors and reservoirs.

The most promising uf the systems is to fit, seed [afd] [uncertain] frtrriter-tern all in a single operation and leave the field, returning only to harvest the crop. Thia means, of [courer,] [uncertain] that a [Tminimum] [uncertain] of at least seven to [cight] [uncertain] operations, expensive in gasoline and man power, are eliminated and that economy permits the farmer to spend much more on [fertilige?.for] [uncertain] the benefit of the immediate crop and the steadily accumulating benefit of all his land. Terracingstrip cropping and contour plowing, Irkaome to many farmers, can be eliminated in the case row crops with no erosion and lit- [tle] [uncertain] water lost.

The system ia based upon" a beery carpet of [Ladino] [uncertain] clover, fairly new importation from Italy, which crowds out weeds and eventually makes [o@] [uncertain] solid and heavy carpet of vegetation. Having the highest protein content of any legume and [prodociing] [uncertain] af the same time prodigious [quattities] [uncertain] of nitrogen im.the soil, i ls perhaps the mont important plant introduction tu this country since alfalfa.
